

Body Cameras & VideoManager

Partner Toolkit

EMEA - 2024

MOTOROLA SOLUTIONS

A first-hand perspective when it matters most

Body Cameras Portfolio

Having an objective, unbiased witness matters. From security guards to police officers, our portfolio of body cameras can be relied upon to capture evidence-grade video of any situation.

Take control of the situation

- Empower front-line teams to take control. When unexpected situations arise, the potential to capture and share real-time video increases situational awareness.

Capture evidence

- The presence of a body-worn camera often helps to calm difficult encounters. Simply press record to capture high-quality video evidence, reassure and protect staff.

Respond faster

- Automatically share video and audio with centralised teams over Wi-Fi or LTE for a faster and smarter incident response.

Demonstrate accountability

- Empower customer-facing staff to prove their professionalism or innocence when confronted by contentious allegations. Body-worn cameras capture irrefutable video and audio evidence.

A first-hand perspective when it matters most

Body Cameras Portfolio

Whether your role is business-critical and your efforts help to sustain operations or it's mission critical and lives are dependent on your duties, support in meeting your responsibilities is paramount. This can come in the form of collaboration: teams working in partnership to complete their daily tasks in a free, secure and optimized way.

Body worn cameras will be your best partner in the journey.

Capturing every interaction, in the moment through live-streaming and for review after the fact, a body camera will be essential for evidentiary purposes and decisions support. Body cameras empower the user to call for assistance immediately, preventing a routine callout from escalating into a major incident, becoming your best prevention tool in the field.

At Motorola Solutions we're dedicated to investing in the development and build of new technologies, assigning significant resources to identifying the solutions which will most benefit our customers' operations.

VB400

Body Cameras Portfolio

The VB400 body camera is designed to make it easy for your team to capture high-quality, first-person video - whether they're working in security or policing.

An independent witness for security guards and police officers.

Capture 1080p high-quality video evidence and experience shift-long battery life with the VB400 body camera. Our proven, trusted device is relied on by leading frontline organisations globally.

- Adapt the VB400's behaviour to your team's responsibilities: enable pre and post-record to capture footage before and after an incident, assign actions to its buttons, and remotely share the view of those in the field
- As soon as the VB400 is docked, footage stored on it is automatically transferred securely and encrypted to VideoManager - without user intervention
- Temperature and weather-resistant, with a battery life of up to 12 hours on a single charge, the VB400 includes dual microphones, a wide-angle lens and Bluetooth and Wi-Fi connectivity
- With radio integration, the VB400 connects easily to your radio device. This enables automatic video recording when the radio's emergency button is activated

VT100

Body Cameras Portfolio

A new perspective when it matters most

Built to create safer working environments, the VT100 is a customisable, easy-to-operate body camera, which includes 720p HD video and integrates seamlessly with your existing CCTV.

- Activate recordings with a single push, instantly capturing footage and saving it to the camera, as well as live-streaming it to a central location
- Alert the control room that a rapid response is required with the remote alarm activation function
- Using our cloud-hosted VideoManager software, assign cameras roles and profiles and system access profiles, supporting a clear evidence trail
- Wear on standby mode for up to six months, preserving the VT100's battery for when it's required
- The lightweight VT100 is designed for customer-facing teams.

Customise the front tag with your logo and brand colours to make the VT100 an integral part of your staff uniform.

V500

Body Cameras Portfolio

Limitless connections and real-time intelligence for mission-critical teams.

Leverage the V500 body camera's LTE, Wi-Fi and Bluetooth capabilities to stream, supervise and share events in real-time, for a more collaborative, safer response.

- Access Motorola Solutions' entire mission-critical ecosystem - including backend software and radio and mobile policing integrations - and turn intelligence into insight
- Ingest and share evidence safely from one user platform, using cutting-edge encryption and security protocols
- Manage footage while still in the field via LTE, or rapidly offload it post-shift with the V500's Smart Dock functionality
- Perform essential firmware upgrades over LTE, for improved productivity on patrol

VideoManager

Software

Prepare and process evidence. Share intelligence.

Enhance the capabilities of your body cameras with VideoManager, our digital evidence management solution. Transforming raw footage into actionable insights, the platform aids prosecution with an effective digital evidence trail.

- VideoManager scales to support every agency size, with roles and device profiles configurable to your organisation
- Depending on the body camera used, your evidence is either sent automatically to VideoManager or transferred once the camera is docked. This package of evidence, created from relevant sources - including fixed video systems, body cameras, in-car videos and audio and radio traffic - is then automatically analysed and reported on, ready to be securely shared
- Permission-based access ensures your evidence is managed only by the appropriate team members, and automated deletion rules reduce administrative burdens
- Configure detailed management reports to deliver relevant information including battery audits, device recording time and incident reports

Body Cameras Toolkit

Motorola Solution's portfolio of body cameras is broad and diverse, with different options to suit the diverse needs of different customers in several vertical markets and industries.

In the commercial area, it will be crucial to differentiate the features that our customer requires in order to offer the right device that can be integrated to the product ecosystem, versatile, scalable, and that generates a real benefit in the daily operations of the end user.

The benefits of this approach will be:

- **Expand your capabilities** using the resources shared and co-brand them to enhance your brand
- **Cost-Effective Marketing** at a hand
- **Boots efficiency** saving time and resources
